DETAILED ACTION

Claims 1-30 are still at issue and are present for examination.

Applicants' amendments and arguments filed on 1-22-03, paper No.12, have been fully considered and are deemed to be persuasive to overcome the rejections previously applied.

Rejections and/or objections not reiterated from previous office actions are hereby withdrawn.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,503,748 B2 which has a common assignee with the instant application even though the inventive entity is different.

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-30 of the instant application drawn to an isolated nucleic acid molecule comprising a polynucleotide having a nucleotide sequence at least 95% identical to a nucleotide sequence of a *Ketogulonigenium* plasmid replicon found on the endogenous plasmid contained in Deposit No. NRRL B-30035, wherein said replicon comprises SEQ ID NO:1 or 4.

Art Unit: 1652

An obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but an examined application claim is not patentably distinct from the reference claim, because the examined claim is either anticipated by, or would have been obvious over the reference claim. See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi* 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985). Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-2 is generic to all that is recited in claim 1 of US Patent No.6,503,748. That is, claim 1 of the reference Patent falls entirely within the scope of claims 1-2 of the instant application or, in other words, claims 1-2 are anticipated by claim 1 of the reference patent. Specifically, the polynucleotide of the claim 1 of the reference patent is the starting polypeptide which is used to get other polynucleotides which differ in some ways (fragments). Therefore the SEQ ID NO:1 of claim 1 in the reference patent can be considered as one of the variant claimed in claim 1 of the instant application and vice versa.

Conclusion

None of the claims are allowable.
